#### NFPA 80 Required Points of Inspection

- 1. No holes or breaks in door or frame.
- Glazing and glass kit/glass beads are intact and securely fastened.
- 3. Door, frame and hardware are in proper working order.
- 4. No missing or broken parts.
- 5. <u>Door clearances are within allowable limits.</u>
  (see Door Assembly Clearance Requirements on inside page of brochure).
- 6. Door closer/spring hinges are operational and door is self-closing.
- 7. Coordinator ensures that door leaves close in proper sequence (pairs only).
- 8. Door is self-latching in the closed position.
- 9. Opening is not equipped with auxiliary hardware items, which interfere with operation.
- 10. No field modifications have been performed that void the label.
- Gasketing and edge seals, where required, are present, continuous, and of the proper type for a fire door assembly.

### The DoorGap Gauge® A Division of PL2. LLC

The Only Gauge You Will Need to Check Fire Door Assembly Clearance Requirements

#### The DoorGap Gauge® is perfect for:

#### Contractors

 A sure way to check Fire Door Clearance Requirements before inspection

#### Inspectors

- · Will speed up your inspections
- More accurate than a tape measure
- · Compact and easy to use

#### Distributors

 Supply with job to ensure Fire Assemblies are installed per Fire Door Requirements

#### Owners / Facility Managers / Safety Directors

 To ensure your Fire Door Assemblies meet the requirements set forth by NFPA 80 current editions.

#### The DoorGap Gauge® can also be used to:

Check life safety egress assemblies

Check other construction assemblies requiring specific clearances and operational tolerances

# Door Assembly Clearance Requirements

NFPA 80 Current Editions

- The clearance between the top and the vertical edges of the door and the frame, and the meeting edges of doors swinging in pairs, shall be 1/8" ± 1/16" for Steel Doors.
- The clearance between the top and the vertical edges of the door and the frame, and the meeting edges of doors swinging in pairs, shall not exceed 1/8" for <u>Wood Doors</u>.
- The clearance under the bottom of a door shall be a maximum of 3/4".
- Where the bottom of the door is more than 38" above the finished floor, the clearance under the bottom of a door shall be a maximum of 3/8" (i.e., Dutch Doors).

#### How to Use The DoorGap Gauge®

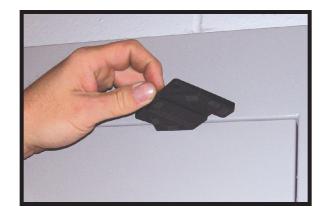

- Can be used with any style door hollow metal, wood, aluminum or fiberglass.
- Clearances shall be measured from the pull face of the door(s).
- Locate the dimension portion of the gauge needed to measure your gap.
- Insert the gauge between the door and frame or at the door bottom.
- The gauge should fit snug in the gap and be able to slide easily along the entire length of the gap.
- If the fit is too loose, too tight, or doesn't fit, the assembly needs to be corrected for proper clearance.
- Experience tradesmen can make corrections using established, approved industry methods.
